

Solution Architect

Description:

We are a fast-paced company seeking a Solution Architect to join our team of talented developers and architects building and supporting our cloud based Product Serialization and Track and Trace solution. Customers use the Frequentz platform to globally track drugs and food, combating counterfeiting and supporting sustainability and social responsibility. Beyond offering a fun and interesting work environment, we offer our employees a great benefits package, and regularly reward loyalty and hard work

Education and Experience:

- Technical expertise in designing and architecting scalable enterprise data management solutions
- Experience in solution design and implementation in serialization or supply chain
- Customer facing skills in communicating with both Business and Technical client staff
- Background in GS-1, EPCIS and Traceability Standards
- Location can be flexible: Willingness to Travel a plus

Qualifications and Responsibilities:

- Design, Architect and implement enterprise solutions for Traceability
- Work with multiple customers and partners in putting together track and trace solutions
- Work in technical pre-sales and support capacity including proof of concepts, demos
- Point of contact between the customer and the development team
- Support customer by diagnosis and resolution of issues
- Deliver solution within an aggressive timetable
- Able to work closely with customers in high pressure environments
- Able to work in startup like flexible environments
- Skilled in enterprise solution integration experience around Java web applications on Linux or Unix
- Background with IBM technologies such as WebSphere Application Server, DB2, MQ is a plus
- Strong problem-solving skills, creative thinker, energetic and motivated self-starter
- Able to communicate clearly and effectively
- Must be detail oriented and must possess a strong drive to deliver quality, consistent results
